

EBEIT graduates more than double

SINCE NMMU was established in 2005 the Faculty of Engineering, Built Environment and IT (EBEIT) has had the most significant increase in graduates – more than doubling its figures in the last ten years from 462 in 2005 to 950 this year.

A new professional engineering degree, the four-year Mechatronics programme, was partially responsible for the large increase in qualifications achieved in this faculty.

In addition, the School of ICT – had a huge increase in student numbers from 2005. Two new qualifications which added to the student numbers substantially are the Higher Certificate: IT (User Support) which was implemented in 2009 and the National Diploma: IT (Support Services) which was implemented in 2007.
